DRAFT
8 Oct 2026
Base plate for the EDIC

Human-Centred Services Blueprint

The Key · Recipe book · MijnServices · Common Ground

TRADITIONAL
Request product → receive product. Per organisation, per counter.

NEW
Life event → recipe → services from several parties → sorted.

HOW TO READ

This plate connects four tracks into one model: The Key (the front door for the resident), the recipe book (life events as reusable recipes), MijnServices (generic functionality by NLDS/VNG) and Common Ground (integration and data at source). Read top to bottom for the layers, left to right for the five steps every recipe follows. Example: 'I want to move home'. Note: case handling only starts at step 3. Orientation and proposal are not an application; a case per organisation exists only after consent. The Key is one dish on the Solutions for Change menu (band at the bottom). The EDIC adopts the plate, the recipe format and the test protocol; every GenAI solution is tested on a recipe step (G1–G5).

LEGEND

- Key moment for the resident
- Human handover
- GenAI test point
- New layer
- Existing standard, reused

▶ Life event	1 Life event & intake	2 Solution	3 Contract & consent	4 Payment & delivery	5 Follow-up & value → Sorted — more time for what matters
Person Resident · entrepreneur · European	'I'm moving house' — via a search question or 'add life event'. Reactive (I have no income) or proactive (I have an idea).	Sees one coherent proposal: address, parking, waste, school, energy, bank.	Gives consent once for data use and sees who sees what.	Pays once; receives the proof as an attestation in the wallet.	Gets proactive follow-up: 'you are also entitled to...'. Stuck? A person takes over.
The Key One front door — killer app for all Europeans · NEW	Download → onboarding → log in with EUDI Wallet (eIDAS 2.0) → My dashboard with search bar.	Proposal screen: public and private options side by side, each provider in its own brand and language.	My data · My authorisations · My contracts — consent per party and per period.	My money · My passes — the city pass as a tile: 'I want to enjoy my city'.	My value · My network · My events — a new life event starts a new recipe.
Recipe book Human-centred orchestration · 25 recipes · The Key dish on the menu · NEW	Select recipe (ID, 'I want...'), ask intake questions, request minimal data — once-only.	Recipe logic composes services across organisations; local variant within policy discretion.	Per service: required data and attestations, legal basis and statutory time limit.	Delivery steps per party, with an explicit human handover point.	KPIs (outcome and output) roll up to KVIs; feedback to recipe owner and EDIC.
MijnServices Generic functionality · NLDS / VNG · REUSE	MijnGegevens · MijnActies An action triggers a recipe.	MijnProducten · MijnAgenda Products become recipe ingredients.	MijnTaken · MijnBerichten A task is a step in the recipe.	MijnZaken · Notificatieservice Track & trace across all parties.	MijnContactmomenten · MijnPlannen · MijnGesprekken · MijnDossier
Case handling Backstage · one case per organisation · starts only after consent · REUSE	*No case yet — orientation and eligibility check, no formal application.*	*No case yet — the proposal is advice, not a decision.*	**×N Register case ×N** One consent starts an application at each party. MijnServices calls this 'intake'.	**Handle → Decide → Notify** In parallel per party: municipality · UWV · bank	**PDCA Evaluate** PDCA with process owner; objection period (6 weeks) runs.
Common Ground & EU infra Interaction · process · integration · services · data at source · REUSE	Haal Centraal BRP · EUDI attestations · FSC	Open Producten / PDC (SDG) · Catalogi API · Objecten API	Zaken API · Documenten API · Autorisaties API · OOTS	Besluiten API · Notificaties API · Payment service	Klantinteracties API · Data processing log · Data spaces
GenAI opportunities Deployed only after testing on a recipe step · TEST	Intake assistant: question in own words, plain language, multilingual. G1	Matching and eligibility pre-check. G2	Explaining consent; document check. G3	Agentic orchestration across parties; status explanation. G4	Proactive signalling; feedback analysis. G5

Digital Rulebook & public values — across all layers
AI Act · GDPR · eIDAS 2.0 · Data Act · Interoperable Europe Act · SDG / OOTS · Woo · NDS
The human measure: each step defines what can be digital and where a person takes over. Data stays at source, control stays with the resident.

DIGITAL TOOLBOX
Solutions for Change — the menu

The Key	Urban Air Mobility	3-30-300	Circular neighborhoods	15-minute city
25 recipes · Human-centred services — this plate	9 recipes · Drones and flying cars, U-space	5 recipes · Green city, Internet of Nature	9 recipes · Material bank and sharing layer	5 recipes · Everything within 15 minutes, hub ladder

Same recipe format, test protocol and KPI framework for all 53 recipes.

recipes → KPIs → strategies → outcomes

8 MISSION STRATEGIES
Mobility · Heating & cooling · Housing · Energy · Digital · Soil & water · Biodiversity · Circular economy

3 OUTCOMES → KVIS
Self-reliance · Liveability · Resilience

GenAI test bench

Testing through recipes

1. **Pick a recipe**
   e.g. THK-08 · 'I want to move home'
2. **Build test scenarios**
   Personas incl. edge cases: low literacy, other language, debt, carer
3. **Fix the norm**
   Expected outcome, legal basis and time limit from the recipe
4. **Place the solution**
   On one recipe step: G1 to G5
   G1 G2 G3 G4 G5
5. **Test**
   Accuracy · plain language · once-only · explainability · human handover · bias · AI Act risk class
6. **Measure**
   KPIs against baseline: lead time, handlings, comprehension, satisfaction
7. **Go / no-go**
   On go: certification and publication in the recipe book

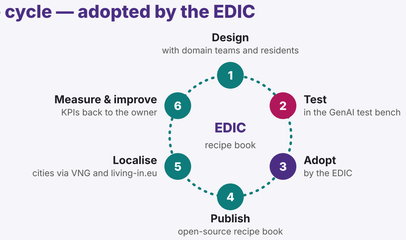

Example — G1 on 'I'm moving house'
The intake assistant may only ask what is not already in the BRP. Doubt about the address (address investigation)? The case goes to a caseworker. Tested with personas who struggle with reading or Dutch.

WHAT THE EDIC ADOPTS
- This layer model
- The recipe format
- The test protocol
- The KPI set per recipe
- Ownership of recipes

Anatomy of a recipe

ID & name	THK-08 · 'I want to move home'
Type	Reactive or proactive
Steps	Intake → solution → contract → delivery → follow-up
Services & parties	Public and private, from the PDC
Data & attestations	Minimal, from source, with consent
Legal basis & time limit	Per service
Ingredients	MijnServices + Common Ground components
Human measure	Handover point and exceptions
Local variant	Municipal policy discretion
KPIs → KVI	Outcome and output → outcome → KVI
GenAI test cases	Scenarios for G1–G5

Recipe cycle — adopted by the EDIC

Status: draft → candidate → tested → adopted (aligned with NLDS: help wanted → community → candidate → standard)

Roles

- **Resident / entrepreneur** — Uses and rates
- **Guiding agent & contact centre** — Offline part, handover
- **Domain team & process owner** — Recipe co-owner, case handling
- **NLDS / VNG** — MijnServices standard
- **Common Ground & suppliers** — Components and APIs
- **Digital Toolbox** — Recipe book curator, registry
- **EDIC** — Adoption, test protocol, data
- **BZK / European Commission** — Frameworks, EUDI Wallet, OOTS

Scale path — think big, start small, scale fast

1. **Start · 1 recipe · 1 city · 100 residents**
   Zoetermeer, civil affairs
2. **Pilot · 15 recipes · 4 cities · 10,000 residents**
   Test scalability
3. **Scale · All cities · 300M Europeans**
   VNG, living-in.eu, EDIC

Draft v0.1 · Serendipity / Digital Toolbox · Open-source concept. Sources: Multi-year digital services strategy Zoetermeer (The Key); VNG MijnServices (pocket guide May 2026, customer view); VNG Common Ground; digitaltoolbox.world. Structure inspired by the Ideal Process talking plate.
